

# Smart ROV Solutions for a Sustainable Aquaculture Future.

The Chinook ROV shown with optional cutter/grabber arm and auxiliary lights

In the fast-growing aquaculture industry, you need reliable, real-time underwater insights to safeguard marine environments and ensure operational efficiency. That's where SEAMOR's Chinook ROV comes in—your trusted partner for precision underwater surveys, rapid environmental assessments, and critical seabed inspections.

Designed for maximum uptime and serviceability, the Chinook is built with a modular, easy-to-maintain structure, ensuring that you spend more time in the water and less time on repairs. With a 600m (2,000 ft.) depth rating and up to 950m (3,000 ft.) umbilical length, the Chinook delivers high-resolution imagery, narrated video documentation, and seamless ocean floor deployments—empowering you to detect pollution, monitor fish health, and prevent costly pen leaks before they escalate.

At SEAMOR, we don't just build ROVs—we uphold environmental responsibility by providing sustainable, long-lasting technology that helps you protect the waters you work in. Invest in an ROV that works as hard as you do. Choose SEAMOR.
