Your Underwater Partner for Enhanced Diving Ops.

IN THE DEMANDING WORLD of commercial diving, you need reliable underwater technology that complements your expertise and extends your capabilities when conditions get challenging. That's where we come in—SEAMOR ROVs are your trusted diving companions for pre-dive reconnaissance, real-time support during complex operations, and accessing areas that present unnecessary human risk.

SEAMOR technology is designed to support skilled commercial divers—not substitute for them. Robust construction that thrives in strong currents and harsh environments means they're always ready when you need them. And thanks to their modular design and accessible components, SEAMOR systems are uniquely serviceable for ready maintenance and minimal downtime.

Our promise of serviceability isn't just about operational efficiency—it's about environmental sustainability. Because at SEAMOR, we believe our marine environment deserves technology that's built to last, not to be replaced. Less waste from disposable systems helps safeguard the marine environments we depend on.

With expandable configurations, your SEAMOR system evolves alongside your operation—from basic visual assistance to advanced capabilities with sonar navigation or high-pressure cavitation cleaning at extreme depths.

Partner with an ROV that lets you see more, do more, and protect more—all while maximizing your team's effectiveness and safety. Buddy up with SEAMOR.

A larger alternative to the Chinook, the Mako can carry payloads up to 50 lbs.
