

FINALLY, SEAMOR Marine designs and manufactures a complete line of durable, high-quality tether reels, including the Sea Otter Reel, built for reliable cable management and storage in demanding marine environments. Constructed from high-grade aluminum and stainless steel, our reels accommodate a wide range of tether diameters, slip rings, and waterproof hub enclosures for integrated electronics such as fiber optic receivers and multiplexers.

Available as an open-frame unit or securely mounted within a rugged Pelican case, the Sea Otter Reel offers a lightweight, compact solution for SEAMOR ROV systems and custom tether management applications. The water-resistant hub enclosure is fully removable for servicing without unspooling the cable - ensuring long-term performance and minimal downtime in the field.

CONTROL STARTS AT THE REEL.

Sea Otter 50 and 100

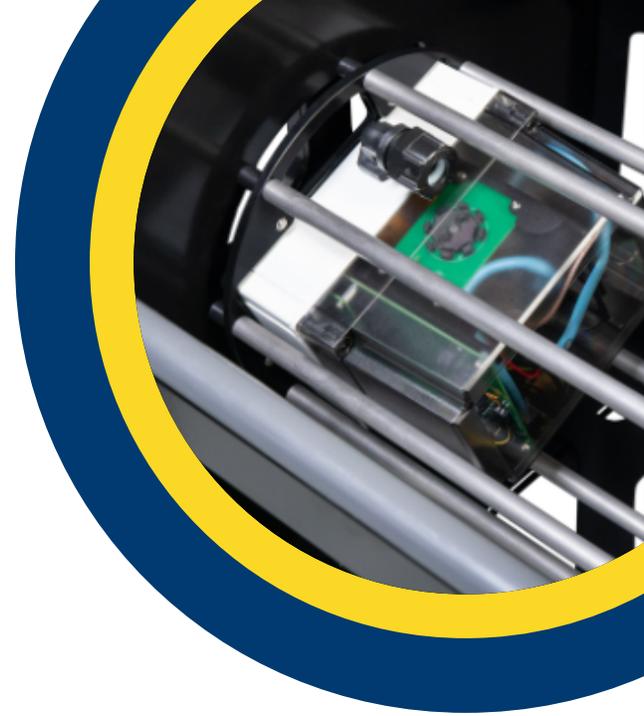

Made in
